Supplementary figures

Fig. 1. Seasonal averages of $\text{H}_2\text{SO}_4$ concentrations in mass mixing ratios (MMR) at 700 hPa (multiplied by $10^{12}$).

Fig. 2. Seasonal changes in the total cloud cover fraction in the CTRL simulation compared to the wo_ODMS simulation. Positive values mean there is an increase in cloud cover in the simulation when the DMS sea water concentrations are present.
