Figure 6 was inadvertently omitted from the final version of our paper. It is included here.

![Freezing activation curves](image)

**Fig. 6.** Freezing activation curves of dry generated 200 nm CID (open squares) and 200 nm ammonium sulfate (filled grey symbols) at $-40^\circ$C. The solid grey line is the homogeneous freezing activation curve of perfectly monodisperse ammonium sulfate predicted using the Koop et al. (2000) parameterization.
