Supplement of

Impact of interannual variations in sources of insoluble aerosol species on orographic precipitation over California’s central Sierra Nevada

Figure S1. Correlation plots of a) echo top height deviation (km) versus % Dust+Bio, b) % ice-induced precipitation versus % Dust+Bio, c) % cloud ice versus % Dust+Bio, and d) precipitation deviation (mm) versus % OC residues (pollution plus biomass burning). Also shown are the Spearman’s correlation coefficients for each correlation.
