We discovered an error in Fig. 7: the correct unit for the Fig. 7 colour scale should be “(K day$^{-1} \times 10^{-3}$)” instead of “(K day$^{-1}$)”. The corrected figure with caption is shown below.
Figure 7. Latitude–pressure distribution of ozone heating rate changes (K day$^{-1} \times 10^{-3}$) for the (a) Ind38 (averaged over 70–100° E), (b) Ind73 (averaged 70–100° E), and (c) Chin73 (averaged over 70–100° E) perturbed simulations, compared to the CTRL simulation.
