The diagrams illustrate the model selection for different ecosystem types (Tundra, Boreal forest, Temperate grasslands, Temperate forests, Tropical grasslands, Tropical forest, Desert and shrublands) in different seasons (Winter, Spring, Summer, Fall) with varying combinations of errors.

- **Legend**: The number of months in which the model selection chooses a flux pattern:
  - White: 0 months
  - Light blue: 1 month
  - Teal: 2 months
  - Dark blue: 3 months

**No errors**
- No differences in selection across months.

**One type of error included**
- (b) Flux errors
- (c) Transport errors
- (d) Retrieval errors

**Two types of error included**
- (e) Flux + transport errors
- (f) Flux + retrieval errors
- (g) Transport + retrieval error

**All error types included**
- (h) Flux + transport + retrieval error

Each diagram shows the percentage of months in which each ecosystem type is selected, with colors indicating the number of errors included in the model selection.
