The graph shows the IH ratio related to OH loss from 1990 to 2015. The data is divided into three categories:

1. $R_{LOH}$, MCF (represented by blue line)
2. $R_{LOH}$, CH$_4$ (represented by green line)
3. $\text{OH}_N / \text{OH}_S$ (represented by red dashed line)

The IH ratio generally increases from 1990 to 2015, with $R_{LOH}$, MCF showing a more significant increase compared to $R_{LOH}$, CH$_4$.
