A correction has been made to Fig. 6 in the paper. The first vertical concentration profile of 1.5–3 nm particles in Fig. 6a
has been changed, as the originally published profile was incorrect.

Figure 6. Vertical profiles during the first measurement flight at 07:30–09:00 on 13 August 2015 (marked in Fig. 5). Panels (a) and (b) show
data from the ascent and panels (c) and (d) from the descent. Panels (a) and (c) show the number concentration of 1.5–3 nm (black solid line)
and 3–10 nm (dashed line) particles and the carbon dioxide concentration (red). Panels (b) and (d) show water vapour concentration (black),
relative humidity (red) and potential temperature (dashes line) profiles. The green line is the estimated boundary layer height.
